LES JOHN PAUL P. OLIVER

AI Engineer | AI Agents, LLM Integrations, and Business Process Automation

Urdaneta City, Pangasinan, Philippines | +63 915 421 3651 | lesjohnpauloliver@gmail.com | linkedin.com/in/lesjohnpaul | github.com/lesjohnpaul | lesjohnpauloliver.dev

SUMMARY

AI engineer with 10 years shipping production systems for an electric utility serving 250,000+ member-consumers. I put LLMs to work inside real business processes: an AI-assisted refund pipeline with human-in-the-loop guardrails, a live AI agent that books meetings through tool use, and automations that cut a 2-week compliance process to under 5 minutes. Sole architect of 16+ production systems. ACS-assessed Software Engineer (ANZSCO 261313). Open to remote AI engineering roles and freelance projects.

SKILLS

AI and LLMs: Claude API (Anthropic), OpenAI API, AI agents, tool use / function calling, prompt engineering, prompt caching, RAG / knowledge-base grounding, human-in-the-loop design, guardrails and prompt-injection defense, LLM cost control, Claude Code, MCP

Engineering: Python, TypeScript, React, Next.js, Node.js, FastAPI, Fastify, Express, C#, PHP, ETL, web scraping, PDF generation, n8n, Inngest, REST APIs

Data and Cloud: SQL Server (DBA, 1.17 TB+), PostgreSQL, Supabase (row-level security), MySQL, Redis, Azure, AWS SES, Vercel, Docker, Linux, CI/CD, Git

EXPERIENCE

PANELCO III Electric Cooperative, Urdaneta City, Philippines | Mar 2016 – Present

System Administration Officer / Solutions Architect | Sep 2022 – Present (promoted from Specialist I, 2019–2022, and Consumer Welfare Assistant, 2016–2019)

- Cut a 2-week tax compliance reporting process to a 2-click Python automation that finishes in under 5 minutes, generating regulated PDFs straight from SQL Server.
- Automated wholesale electricity spot-market invoicing: a full-workday, ~50-invoice batch now runs in under 30 seconds with zero transcription errors (59 automated tests).
- Architected an IT service management platform for ~300 staff across 12 offices (SLA engine, approvals, QR asset custody, TV command center); load-tested at 300 simultaneous requests with 15,000-ticket reports under 500 ms (p95).
- Built real-time QR registration for the annual general assembly: 13,000+ attendees across 5 venues, registration cut from ~3 minutes to under 15 seconds per member.
- Leading ACIRS, a 24/7 AI customer-support system that answers from the knowledge base and auto-escalates to the right department (launching Q1 2027).
- Rebuilt the legacy PHP meter reading platform in React and Fastify side by side on the live database with no downtime; shipped a billing self-service portal and an e-invoicing service for 250,000+ consumers.
- Sole architect of a ₱14.95M Azure hybrid cloud migration; run 4 mission-critical SQL Server databases (1.17 TB+) at 99.9% uptime; in-house systems replaced vendor quotes, saving an estimated ₱8M+ over 3 years.

Freelance AI Engineer | 2024 – Present | Remote

- Founded and run Sneaker Symphony solo: scrape-to-catalog import and a Claude API pipeline that writes and schedules social posts (Next.js, Supabase, Inngest, PayMongo).

FEATURED PROJECTS

AI-Assisted Refund Automation | Python, FastAPI, SQL Server, Claude | case study

- LLM inside a money workflow, built to be safe: Claude reviews flagged refunds with read-only tools in a fixed JSON schema; deterministic rules and a human confirm every ledger change.
- Spans two legacy systems with no API; 7 request types run in single transactions with saved reverse scripts; AI failures never fail the batch; 538 automated tests.

Pao: Live AI Agent | Next.js, Claude API, Redis, Cal.com | try it at lesjohnpauloliver.dev

- Answers only from verified data, checks live availability, books meetings, and alerts by email and Telegram; hardened with prompt-injection defenses, rate limits, and an atomic daily spend cap (~$0.0002 per message with prompt caching).

WeCare: Multi-Tenant Pharmacy SaaS | React 19, Supabase, PostgreSQL | case study

- Live since August 2026 for a multi-branch pharmacy and clinic operator: POS, PhilHealth claims, FEFO inventory, CEO dashboards. Tenant isolation in row-level security, proven by a two-tenant test matrix; ledger load-tested at 10× production volume, 143 ms worst case.

EDUCATION AND CERTIFICATIONS

BS Information and Communications Technology, Pangasinan State University, 2015

ACS Skills Assessment: Software Engineer (ANZSCO 261313, valid to Mar 2027) | Microsoft SQL Server Administration (2024) | Full-Stack Web Development, GoIT (2023–2024) | AWS Innovate: Modern Applications (2022) | Data Privacy, Vulnerability Assessment & Ethical Hacking, Mapua University (2021)
