LES JOHN PAUL P. OLIVER

AI Engineer | LLM Agents, AI Automation, Full-Stack Production Systems

Philippines (Remote) | +63 915 421 3651 | lesjohnpauloliver@gmail.com | linkedin.com/in/lesjohnpaul | github.com/lesjohnpaul | lesjohnpauloliver.dev

SUMMARY

AI engineer who ships LLM features into real business operations, not demos. 10 years building production systems for a utility serving 250,000+ consumers; sole architect of 16+ of them. Recent work: an AI-assisted refund pipeline with human-in-the-loop safety, a live tool-using AI agent, and automations that turned weeks of manual work into minutes. ACS-assessed Software Engineer (ANZSCO 261313).

AI PROJECTS IN PRODUCTION

AI-Assisted Refund Automation | Claude, Python, FastAPI, SQL Server | case study

- Put an LLM inside a money workflow safely: Claude reviews flagged refunds with read-only tools and a fixed JSON schema, while deterministic rules and a human confirm every ledger change.
- Automated a daily approval queue spanning two legacy systems with no API: 7 request types run in single transactions with saved reverse scripts; AI failures never fail the batch; 538 automated tests.

Pao: Live AI Agent with Tool Use | Claude API, Next.js, Redis, Cal.com | try it at lesjohnpauloliver.dev

- Built an agent that answers only from verified data, checks live calendar availability, books meetings, and alerts by email and Telegram.
- Hardened it for the open internet with prompt-injection defenses, rate limits, and an atomic daily spend cap; prompt caching keeps cost near $0.0002 per message.

WeCare: Multi-Tenant Pharmacy SaaS | React 19, Supabase, PostgreSQL | case study

- Shipped a platform live since August 2026 for a multi-branch pharmacy and clinic operator (POS, PhilHealth claims, FEFO inventory, CEO dashboards), with tenant isolation in row-level security proven by a two-tenant test matrix and a ledger load-tested at 10× production volume (143 ms worst case).

EXPERIENCE

PANELCO III Electric Cooperative, Urdaneta City, Philippines | Mar 2016 – Present

System Administration Officer / Solutions Architect | Sep 2022 – Present (promoted from Specialist I, 2019–2022, and Consumer Welfare Assistant, 2016–2019)

- Cut tax compliance reporting from 2 weeks to under 5 minutes with a 2-click Python automation that generates regulated PDFs straight from SQL Server.
- Cut wholesale electricity invoicing from a full workday to under 30 seconds per ~50-invoice batch, with zero transcription errors and 59 automated tests.
- Architected an IT service management platform for ~300 staff across 12 offices; load-tested at 300 simultaneous requests, with 15,000-ticket reports under 500 ms (p95).
- Cut annual-assembly registration from ~3 minutes to under 15 seconds per member for 13,000+ attendees across 5 venues with a real-time QR platform.
- Leading ACIRS, a 24/7 AI customer-support system that answers from the knowledge base and routes escalations to the right department (launching Q1 2027).
- Modernized the legacy PHP meter reading platform to React and Fastify with no downtime, and shipped a billing self-service portal and e-invoicing service for 250,000+ consumers.
- Led a ₱14.95M Azure hybrid cloud migration as sole architect; run 4 SQL Server databases (1.17 TB+) at 99.9% uptime; in-house builds saved an estimated ₱8M+ in vendor costs over 3 years.

Founder and Engineer, Sneaker Symphony | 2024 – Present | Remote

- Run an online store solo with a scrape-to-catalog import pipeline and a Claude API pipeline that writes and schedules social posts (Next.js, Supabase, Inngest, PayMongo).

SKILLS

AI / LLM: Claude API (Anthropic), OpenAI API, AI agents, tool use / function calling, prompt engineering, prompt caching, RAG and knowledge-base grounding, structured outputs (JSON schema), human-in-the-loop design, guardrails and prompt-injection defense, LLM cost control, MCP, Claude Code

Engineering: Python, TypeScript, React, Next.js, Node.js, FastAPI, Fastify, Express, C#, PHP, REST APIs, ETL, web scraping, n8n, Inngest, automated testing (pytest, Playwright)

Data and Cloud: SQL Server (DBA), PostgreSQL, Supabase (row-level security), MySQL, Redis, Azure, AWS SES, Vercel, Docker, Linux, CI/CD, Git

EDUCATION AND CERTIFICATIONS

BS Information and Communications Technology, Pangasinan State University, 2015

ACS Skills Assessment: Software Engineer (ANZSCO 261313, valid to Mar 2027) | Microsoft SQL Server Administration (2024) | Full-Stack Web Development, GoIT (2023–2024) | AWS Innovate: Modern Applications (2022) | Data Privacy, Vulnerability Assessment & Ethical Hacking, Mapua University (2021)
