LES JOHN PAUL P. OLIVER

AI Engineer | AI Agents, LLM Integrations, and Business Process Automation

Urdaneta City, Pangasinan, Philippines | +63 915 421 3651 | lesjohnpauloliver@gmail.com | linkedin.com/in/lesjohnpaul | github.com/lesjohnpaul | lesjohnpauloliver.dev

SUMMARY

AI engineer with 10 years building and running production systems for an electric utility serving 250,000+ member-consumers. I ship LLM-powered agents and automations that remove manual work: an AI-assisted refund workflow with human-in-the-loop guardrails, a 24/7 AI customer-support system, and a live AI assistant that books meetings through tool use. Sole architect of 16+ production systems, from a 2-week compliance process cut to under 5 minutes to an IT service management platform for 300 staff. ACS-assessed Software Engineer (ANZSCO 261313). Open to remote AI engineering roles and freelance projects.

SKILLS

AI and LLMs: Claude API (Anthropic), OpenAI API, AI agents, tool use / function calling, prompt engineering, prompt caching, knowledge-base grounding, human-in-the-loop design, LLM guardrails and prompt-injection defense, LLM cost control, Claude Code, Model Context Protocol (MCP)

Automation and Data: Python, process automation, ETL pipelines, web scraping, PDF generation, n8n, Inngest, REST API integration, scheduled jobs, web analytics

Full-Stack: TypeScript, JavaScript, React 19, Next.js, Node.js, Express, Fastify, FastAPI, C#, PHP, Tailwind CSS, Three.js

Databases: Microsoft SQL Server (DBA, 1.17 TB+), MySQL, PostgreSQL, Supabase (row-level security), Redis

Cloud and DevOps: Microsoft Azure, AWS (SES), Vercel, Docker, Linux, Windows Server, CI/CD, Git, hyper-converged infrastructure

Security: network detection and response (NDR), incident response, rate limiting and bot protection, Data Privacy Act compliance

EXPERIENCE

PANELCO III Electric Cooperative, Urdaneta City, Philippines

Mar 2016 – Present | Promoted three times, from consumer welfare to sole engineer-architect of the cooperative's core systems

System Administration Officer / Solutions Architect | Sep 2022 – Present

- Automated the daily refund and payment-correction approval queue across two legacy billing systems with an AI-assisted, human-in-the-loop pipeline (see Featured Projects).
- Leading ACIRS, a 24/7 AI customer-support system that answers from the company knowledge base, auto-escalates to the right department, and builds a Customer-360 record from every interaction (launching Q1 2027).
- Cut a 2-week tax compliance reporting process to a 2-click Python automation that finishes in under 5 minutes, generating the regulated PDFs straight from SQL Server with no manual transcription.
- Automated wholesale electricity spot-market invoicing: a full-workday, ~50-invoice manual batch now runs in under 30 seconds with zero transcription errors (React, FastAPI, SQL Server; 59 automated tests).
- Architected an enterprise IT service management platform for ~300 staff across 12 offices: help desk with a business-hours SLA engine, approvals, QR asset custody, maintenance, knowledge base, reports, and a 9-screen TV command center; load-tested at 300 simultaneous requests with 15,000-ticket reports under 500 ms (p95).
- Built a real-time QR registration platform for the annual general assembly: 13,000+ attendees checked in across 5 simultaneous venues, cutting registration from ~3 minutes to under 15 seconds per member.
- Modernized the meter reading platform from legacy PHP/jQuery to React and Fastify, running side by side on the live MySQL database with no migration downtime; added consumption anomaly detection, invoice-gap analysis, TV coverage maps, and a field app.
- Delivered a consumer billing self-service portal (Next.js, Supabase, on-prem sync agent) and a live e-invoicing service sending password-protected PDF statements by email and SMS with automatic provider fallback.
- Sole architect of a ₱14.95M Azure hybrid cloud migration (identity, collaboration, disaster recovery); administer 4 mission-critical SQL Server databases (1.17 TB+) at 99.9% uptime, including a zero-data-loss recovery of a page-corrupted production database.
- Replaced third-party vendor solutions with in-house systems, saving an estimated ₱8M+ over 3 years; hardened network segmentation and incident response, built in-house east-west threat detection, and trained 50+ staff on security.

System Administration Specialist I | Dec 2019 – Sep 2022

- Shipped the Online Billing Inquiry System (PHP, MySQL, JavaScript) so 250,000+ consumers could self-serve billing remotely, reducing in-person service traffic by 35% and saving ~₱2M versus outsourced quotations.
- Built a web-based electrical rates entry system, replacing a third-party module quoted at ₱1.2M.
- Maintained Linux and Windows web servers at 99% uptime with automated backups and monitoring; managed access controls for Data Privacy Act compliance.

Consumer Welfare Assistant | Mar 2016 – Dec 2019

- Built an internal records-management system that automated 80% of manual filing and retrieval, recovering ~20 staff-hours per week.

Freelance AI Engineer and Full-Stack Developer
2024 – Present | Remote

- Delivered WeCare, a live multi-tenant pharmacy POS and dispensing platform for a multi-branch pharmacy and clinic operator (see Featured Projects), and Pao, a live AI agent that books client meetings.
- Founded and run Sneaker Symphony (sneakersymphony.com) solo: a scrape-to-catalog import pipeline and a Claude API content pipeline that writes and schedules posts for Facebook, Instagram, and TikTok (Next.js, Supabase, Inngest, Cloudflare R2, PayMongo with idempotent GCash, Maya, and card payments).

FEATURED PROJECTS

AI-Assisted Refund Automation | Python, FastAPI, SQL Server, Claude
Case study: lesjohnpauloliver.dev/work/ai-assisted-refund-automation

- LLM in a money workflow, built to be safe: Claude reviews each flagged refund with read-only tools and answers in a fixed JSON schema, while deterministic rules and a human confirm every ledger change.
- Spans two legacy systems with no API; 7 request types, each its own recipe module that executes in one transaction with a saved reverse script, so every change can be undone.
- AI notes are cached per case and capped per run, and an AI failure never fails the batch; 538 automated tests cover the pipeline, recipes, API, auth, and reports.

Pao: Live AI Agent with Tool Use | Next.js, Claude API, Redis, Cal.com
Try it: lesjohnpauloliver.dev

- Production AI agent that answers only from verified portfolio data, checks live calendar availability, books meetings, and captures leads with email and Telegram alerts.
- Hardened for the open internet: prompt-injection defenses, bot protection, per-IP rate limits, server-side history, and an atomic daily spend cap; prompt caching keeps cost near $0.0002 per message.

WeCare: Multi-Tenant Pharmacy SaaS | React 19, Supabase, PostgreSQL
Case study: lesjohnpauloliver.dev/work/wecare-pharmacy-pos-dispensing-platform

- Live since August 2026 across a multi-branch pharmacy and clinic operator: POS dispensing, PhilHealth claims, FEFO inventory, replenishment, and live CEO dashboards.
- Tenant isolation enforced in PostgreSQL row-level security and proven by a two-tenant test matrix; stock-value ledger load-tested at 10× production volume with a 143 ms worst case (85 migrations, 66 SQL functions).

EDUCATION

Bachelor of Science in Information and Communications Technology, Pangasinan State University, 2015

CERTIFICATIONS

- ACS Skills Assessment: Software Engineer (ANZSCO 261313), valid through March 2027
- Microsoft SQL Server Administration, Everywhere Consulting, Inc. (2024)
- Full-Stack Web Development, 10-month program, GoIT Philippines (2023–2024)
- AWS Innovate: Modern Applications, Amazon Web Services (2022)
- Data Privacy, Vulnerability Assessment, and Ethical Hacking, Mapua University (2021)
